- Author
 - *LETRS for Early Childhood Educators (2018)*
 - *Multisensory Basic Language Skills* (Birsh & Carreker, 2019) Chapter 6 Phoneme Awareness
 - Good Talking Words
 - Building Early Literacy and Language Skills
- Literacy Consultant
- Speech-Language Pathologist
- Associate Professor (retired)
 - Instruction and research in language and literacy development and challenges.

Redmond, Oregon

A Few Queries

1. **T or F** Phonological awareness requires alphabet letters.
2. Which do young children learn to manipulate first? Syllables or Sounds
3. The word “fix” has this many sounds: _____
4. The word “catch” has this many sounds: _____
5. What phonological awareness skill at the beginning of kindergarten is strongly predictive of literacy learning in second grade?

Today’s Agenda

-  Phonemic Awareness PHacts
-  PA Developmental Trends
-  PA Phun Instruction and Intervention Strategies

Language and Literacy in the Brain

Broca’s area: involved in production of speech sound

Wernicke’s area: involved in Understanding of speech

Motor cortex: controls the Movements of muscles

Arcuate fasciculus: connects Wernicke’s area to Broca’s area.

“PH”onological Processing Ponders

What is your understanding of these “PH” terms?

- ☺ ☺ Phonological vs phonemic awareness
- ☺ ☺ Phonological naming, retrieval, and recoding
- ☺ ☺ Phonological working memory
- ☺ ☺ Phonological sensitivity
- ☺ ☺ Phonological representation

Phonological Processing Components

| Phonological Processing | | |
|---|--|--|
| Phonological Awareness <ul style="list-style-type: none"> Rhyme awareness Syllable awareness Phonemic awareness | Phonological Naming <ul style="list-style-type: none"> Word retrieval Word recoding | Phonological Working Memory <ul style="list-style-type: none"> Short term Temporary storage |
| Phonological Representation | | |

(LETRS EC, Paulson & Moats 2018)

- Phonological awareness:** Ability to *consciously manipulate* syllables and sounds (phonemic awareness) in oral language
- Phonological naming:** (access to lexical storage): Ability to *retrieve* words from long-term memory
- Phonological working memory:** Ability to process and recall sound information in *short-term memory*

Phonological Representation

- How the pronunciations of known words are stored ("**inner speech**"). (Gillon, 2017; Metsala & Walley, 1998)
- Phonological representations of whole words to word parts (segmental units) is necessary for the development of explicit phoneme awareness. (Rvachew, Nowak, & Cloutier, 2004)

Phonological Sensitivity

Time period when infants and toddlers become "sensitive" to speech sounds, syllable patterns and word boundaries. (Morais, 1991; Guttorm et al., 2005; van Goch, McQueen, & Verhoeven, 2014)

Rhyme sensitivity emerges with speech sound development. (Rvachew & Grawburg, 2006)

Babies born up to three months premature can recognize different syllables in human speech. (Mahmoudzadeh et al., 2013)

Phonological Sensitivity or Phonological Representation?

- A child saying "It's hard for me to rememerize."
- Young child saying "I wike da wed one."
- A child asking "Is Grandpa abavailve?"
- Wanting to turn the TV channel and asking for the "marote"
- A child saying "one, two, free, four"

A Closer Look at Blending and Segmenting

Synthesis – Blending (putting together)

- Phoneme synthesis is needed for phonic decoding.

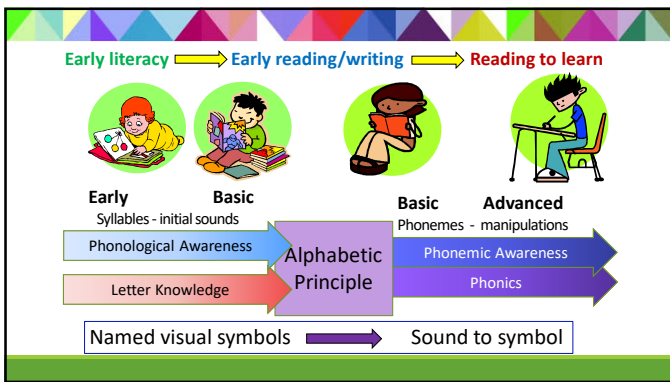

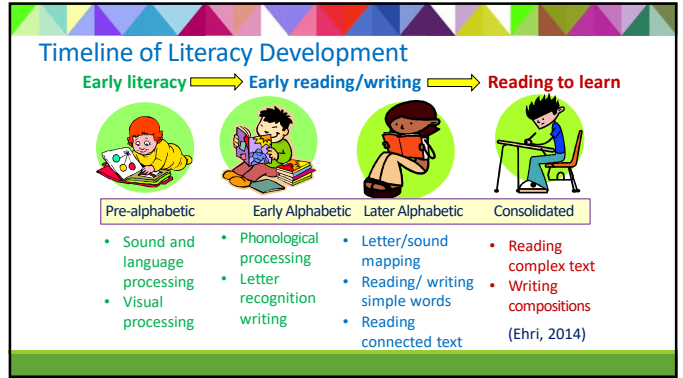

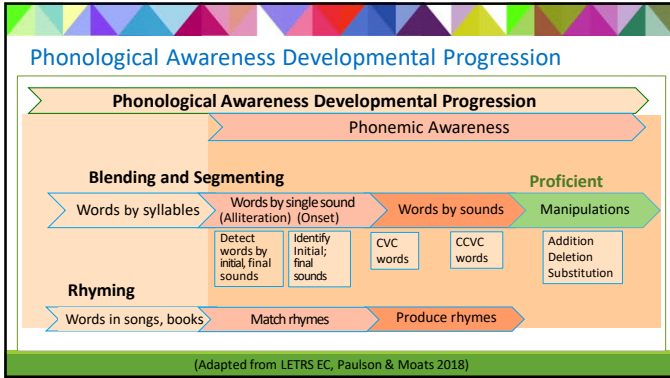

Analysis – Segmenting (isolating, identifying/classifying)

- Phoneme analysis is needed for orthographic learning (spelling and rapid sight word recognition)

Progression of Phonological Awareness Skills

| | | |
|------------|------------------------------------|---|
| Early PA | Toddler to preschooler | Segmenting and blending syllables Rhyme detection |
| Basic PA | Preschool to 1 st grade | Segmenting and blending initial and individual phonemes Rhyme production |
| Complex PA | 1 st grade and beyond | Adding, deleting, substituting, and reversing word segments |

(Adapted from Kilpatrick, 2015)

Precursors of Dyslexia in Early Literacy

Deficits in:

- Phonological awareness,
- Rapid automatized naming,
- Verbal working memory,
- Letter knowledge, and
- Oral language/vocabulary

across languages

have been shown to be robust precursors of dyslexia in children as young as age three and into kindergarten.

(Al Otaiba & Fuchs 2006; de Jong & van der Leij, 1999; Georgiou & Parrila, 2008; Puolakanaho et al., 2007; Schatschneider et al., 2004; Wanzek & Vaughn, 2007)

“Early Identification of Reading Disabilities: Within an RTI Framework”

A screening battery in kindergarten of:

- Letter name fluency
- Phonemic awareness (sound matching)
- Rapid Naming
- Nonword repetition

Accurately identified good and poor readers at the end of 1st grade.

(Catts, Nielsen, Bridges, Liu, & Bontempo, 2015)

| Screener Indicators | Instruction Targets |
|-----------------------|-----------------------|
| ➤ Letter name fluency | ➤ Letter names? |
| ➤ Phonemic awareness | ➤ Phonemic awareness? |
| ➤ Rapid Naming | ➤ Rapid Naming? |
| ➤ Nonword repetition | ➤ Nonword repetition? |

Predicting Later Reading Development

TWO strong predictors of reading achievement in early kindergarten for 2nd grade literacy learning are:

- ☑ **Phoneme awareness (sound isolation)**
- ☑ **Letter name knowledge**

(National Early Literacy Panel, 2008; National Reading Panel, 2000)

Robust PA Instruction for Every Student

|--|---|---|

Rhyme Routines in Pre-k to Kindergarten

- Rhyme children’s names while taking attendance and when dismissing them from circle.
- Change the beginning sound in students’ names to create a rhyme (e.g., Terry Berry, Chris Bris, Jaylon Chaylon).
- Use rhyming words while giving directions (“It’s time to go to the *bribary*.” instead of library).
- Point out words that rhyme in songs and children’s books. (“Flopsy and Mopsy rhyme! They sound the same at the end.”)
- So many, many more!

Rhyme Routines in Kindergarten to Grade 1

- Change children’s names to the sound corresponding to the letter patterns being taught when taking attendance (e.g., Mrs, Mavid, Mohn, Mally). (Caveat: Know what your students’ names change into before you go there!)
- Use an alphabet chart and the children give a rhyming word as you point to a **consonant** letter (e.g., **rope**: bope, cope, dope, fope, gope, etc.).
- Create a chart using the phonic patterns being taught to create a string of rhyming words and nonwords.
- So many more!

Transition of Early, Basic to Complex PA Skills

Blending/Segmenting Hints

- Use motions or gestures.
- Highlight mouth gesture.
- When segmenting words, say each syllable or sound in one-second intervals. As needed, decrease the time interval to make the task easier, and increase it to make the task more challenging.
- Say the *sounds* in the word and not the letter *names* (e.g., say “/f/-/i/-/sh/,” not “f-i-s-h” or “/fuh/-/i/-/shuh/”).
- Syllables are easier than sounds to identify in words.
- Beginning sounds are easier to isolate than ending sounds; middle sounds are the hardest.
- Consonant blends are more difficult.

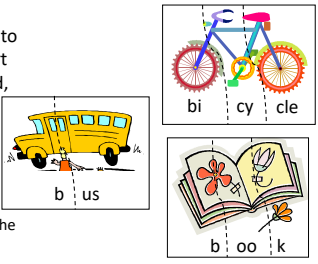

Blending and Segmenting Routines in Pre-k-K

- Segment and blend children's names while taking attendance, first by syllables, then initial sounds, then ending sounds.
- Have children blend and segment say new vocabulary words.
- Use "Ro-bot Re-por-ting" while giving directions.
- Use the balance scale with counters and pictures to compare "which word weighs more" based on the number of syllables.
- Use a Magic Mirror or play "I Spy" for children to blend a segmented word to find an object.
- Play a sorting game to place items together that begin with the same sound.

Blending and Segmenting Routines in Pre-k-K

- Prepare and use picture puzzles to put together and pull apart. Start with syllables, then, initial sound, then individual sounds.
- Use letters on picture puzzles for pre-k to K.
- Do NOT use letters for older students. But have them connect letters once they have identified the sounds.

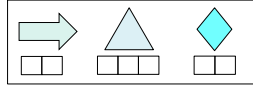

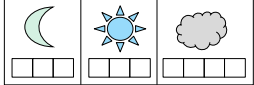

Blending and Segmenting Routines in K-1

- Focus on phonemes in words.
- Use progressively more complex words (CVC then CCVC and CVCC) to blend and segment.
- Sort pictures into groups based on initial sound, final sound, words with the same number of sounds.
- Make phonemic connections to letter patterns.
- So many more!

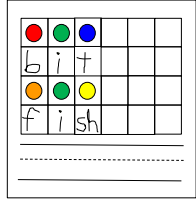

Transition of Early, Basic to Complex PA Skills

Elkonin Boxes

Syllables: 

Phonemes: 

Written Words
Say-it-Tap-it-Write-it

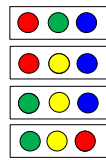

Word Chain Activity

"Make *tap*"

"Change *tap* to *top*"

"Change *top* to *hop*"

"Change *hop* to *hot*"

Blending and Segmenting in Grade 1 and Beyond

- If students have not established well-developed basic phonemic awareness skills, they should receive a comprehensive phonological processing assessment to determine areas of need.
- If phonemic awareness skills are underdeveloped, activities should NOT include letters. Establish phonemic awareness accuracy and automaticity – then connect to letter patterns.

Complex Phonological Awareness Skills

- **Deletion:** Remove a syllable or phoneme from a word.
calculator → calculate *talked* → talk
- **Addition:** Add a syllable or phoneme to a word.
fix → affix *top* → stop
- **Substitution:** Switch a phoneme in a word.
Change *take* to *bake* Change *bake* to *bale*
- **Reversal:** switch initial and end consonant sounds in a word
pat → *tap*

Syllable deletion can connect to morpheme awareness.

Rapid and automatic to achieve phoneme proficiency

Rhyming Activity Accommodations

What to do when a child . . .

- Isn't able to match words that rhyme?
- Can't provide a word that rhymes?

- Intentionally point out words that rhyme often
- Imitation
- Provide a choice
- Use mouth cues
- Use listening devices

What to do when a child . . .

- Can match words that rhyme?
- Is able to provide a word that rhymes?

- Go to the next level
- Provide several words that rhyme

Blending/Segmenting Activity Accommodations

- How might you make a task easier?
 - Imitation
 - Physical assist with motion
 - Provide a choice
 - Use mouth cues
 - Use listening devices
- How might you make a task challenging?
 - Go to the next linguistic level and/or PA skill

Foundational Skills Needed for Orthographic Mapping for Remembering Words

- Oral language development
- Phoneme segmentation and blending
- Proficient grapheme-phoneme correspondences
- Proficient phonemic awareness (Manipulation tasks)
